

Blender: Basic BGE and Flappy

By Steffin Rayen :)

What are the main components of a BGE?

Logic Editor:

1. **Sensors** - Mode of input
2. **Controllers** - Your logic (usually a set of code)
3. **Actuators** - What should be affected

Basic BGE with just 3 scripts

1 | Bullet Script

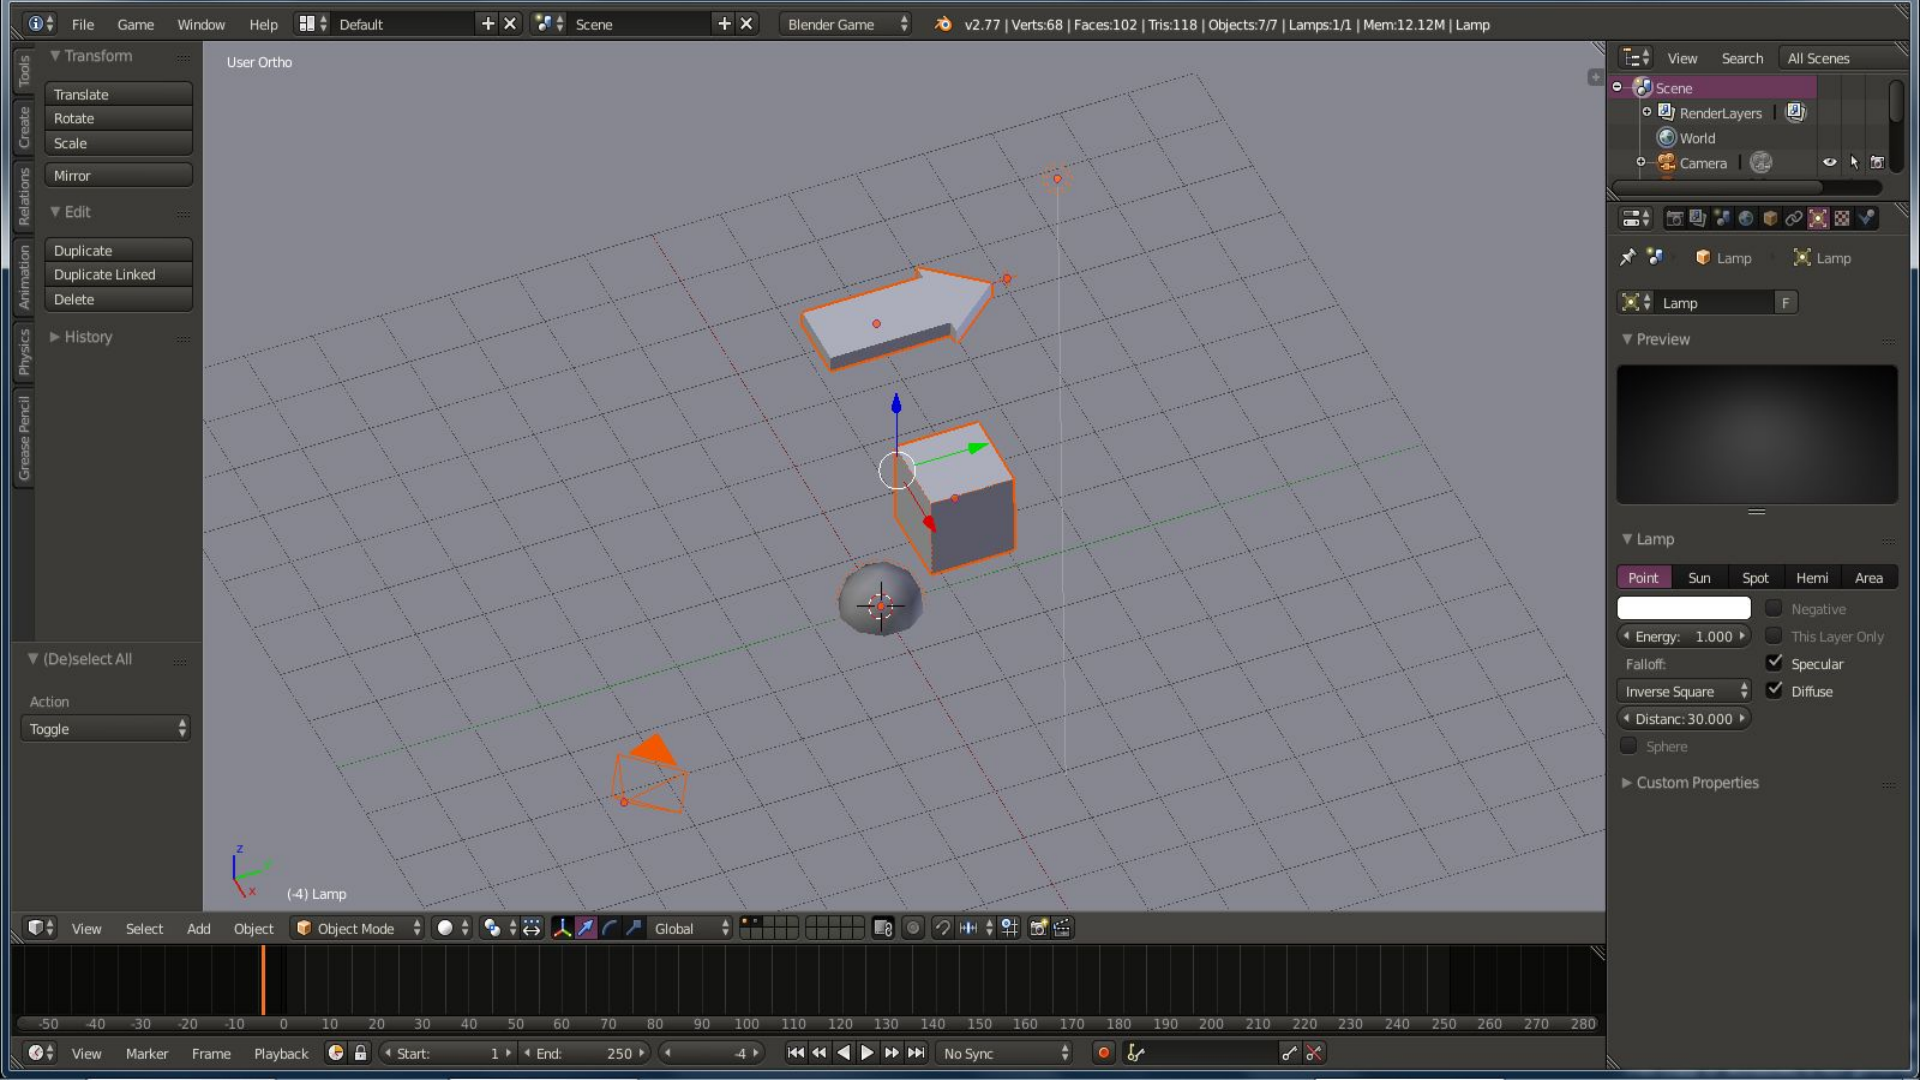

- When should it appear?
- What should the bullet do?
- Any Bullet specific property?

2 | Player Script

- How is the motion controlled?
- How is collision manipulated?
- How often can it shoot in what projectile?

3 | Obstacle Script

- What is its life expectancy?
- How is collision with the player/bullet manipulated?
- How does it disappear?

```

20 import bge
21 def main():
22     cont = bge.logic.getCurrentController()
23     player = cont.owner
24     keyboard = bge.logic.keyboard
25     scene = bge.logic.getCurrentScene()
26     ## bge.logic.KX_INPUT_ACTIVE
27     ## bge.logic.KX_INPUT_JUST_ACTIVATED
28     if bge.logic.KX_INPUT_ACTIVE == keyboard.events[bge.events.WKEY]:
29         ## move forward with W
30         player.applyMovement((0, .1, 0), True)
31     if bge.logic.KX_INPUT_ACTIVE == keyboard.events[bge.events.SKEY]:
32         ## move backwards with S
33         player.applyMovement((0, -.1, 0), True)
34     if bge.logic.KX_INPUT_ACTIVE == keyboard.events[bge.events.AKEY]:
35         ## turn left with A
36         player.applyRotation((0, 0, .1), True)
37     if bge.logic.KX_INPUT_ACTIVE == keyboard.events[bge.events.DKEY]:
38         ## turn right with D
39         player.applyRotation((0, 0, -.1), True)
40     if bge.logic.KX_INPUT_JUST_ACTIVATED == keyboard.events[bge.events.SPACEKEY]:
41         ## shoot the bullets with Space
42         kugel = scene.addObject("Kugel", "shoot", 250)
43         ## Kugel = bullet-name
44         ## shoot = empty where to shoot from
45         ## 250 = height of bullet shooting
46         kugel.applyForce((0, 1000, 200), True)
47         ## 0 = force on x-axis
48         ## 1000 = force on y-axis
49         ## 200 = force on z-axis
50         ## True for local force
51         kugel.color = (1, 0, 0, 1)

```

How is Flappy made?

1. This is a scriptless endless randomly generated holed walls, where a textured 3D object (the Flappy bird) is controlled using the keyboard (space bar) to pass through the hole in wall.
2. The logic for the game is applied using the Blender Game Physics through the mainly through Logic Editor (Controller, Actuator and Sensor).
3. Particle Physics is also applied to the **Bird** and **Hole** object.
